PROFILE

Information Science and Engineering graduate specializing in VAPT, Red Teaming, and backend development, currently interning as a Security Engineer while sharpening skills through CTFs. Seeking a VAPT Analyst role to grow and contribute to impactful security projects.

EDUCATION

- Acharya Institute Of Technology** Bangalore, India
B.Tech - Information Science Engineering; GPA: 8.5 *August 2022 - August 2026*

SKILLS SUMMARY

- Languages:** Python, Bash, SQL, JavaScript
- Security:** Nmap, Burp Suite, Metasploit, Wireshark, Hydra, Netcat, Gobuster, ffuf, John the Ripper, Hashcat
- Platforms:** Linux (Kali, Parrot, Ubuntu), Windows, Active Directory, Docker
- Cloud:** AWS, GCP
- Concepts:** VAPT, Web Application Security, Network Security, Active Directory, OWASP Top 10, MITRE ATT&CK

EXPERIENCE

- Gigahertz Consultants Private Limited** Bangalore, India
Security Engineer *Jun 2026 – Present*
 - Security Operations:** Contributed to security-related activities and collaborated with team members to support ongoing security initiatives.
 - Security Research:** Researched vulnerabilities, attack techniques, and security best practices to strengthen understanding of modern cyber threats.
 - Technical Environment:** Worked in Linux and Windows environments while utilizing networking and security concepts during day-to-day tasks and self-driven technical learning.
 - Professional Development:** Continuously enhanced practical cybersecurity skills through hands-on labs, security tooling, and industry certification preparation.

PROJECTS

- VulnHunter - Web Security Scanner (MERN Stack, Security Analysis):** Developed a full-stack web security tool to identify vulnerabilities, visualize scan results, and generate PDF reports. Implemented automated scanning logic and reporting features for improved security analysis. Tech: MongoDB, Express.js, React, Node.js
- AI Password Security System (Machine Learning, Flask):** Developed an AI-based system to detect weak or compromised passwords using machine learning models and custom security policies. Implemented backend services for password analysis. Tech: Python, Flask, Scikit-learn
- Cyber WatchDogs - Intrusion Detection System (Raspberry Pi, ELK Stack):** Built a Raspberry Pi-based IDS with real-time traffic monitoring, honeypot simulation, and threat visualization dashboard. Improved low-cost network security monitoring. Tech: Python, ELK Stack, Raspberry Pi
- AI-Driven Cyber Warfare Simulator (Deep Reinforcement Learning, Raspberry Pi):** Built an AI-driven Red Team vs. Blue Team simulator where agents co-evolve via Deep Reinforcement Learning on a Raspberry Pi testbed. Implemented LLM-based phishing and OWASP attack modules for Red Team, and DarkBERT/DistilBERT-based detection for Blue Team. Tech: Python, PyTorch, Flask, React, MongoDB

CERTIFICATIONS

- TryHackMe — Pre-Security, Cyber Security 101, Jr Penetration Tester
- Pursuing CEH, with future interest for eJPT or PJPT

ACHIEVEMENTS

- Winner — Hack-a-League 3.0 (Cybersecurity Domain) at Global Academy of Technology
- Runner-up — Acharya CTF hosted by Acharya Institute of Technology
- 2nd Place — College Journal Research Paper Publishing
